Assessment of Motor and Process Skills (AMPS)

Come join us for an exciting 5-day workshop that will change the way you approach OT practice!

The AMPS is a tool to evaluate a person’s quality of ADL task performance.

- Measure the amount of physical effort, safety, and independence a person demonstrates while doing ADL tasks
- Test a person in the context of doing familiar and client-selected personal or instrumental ADL tasks (more than 120 task choices)
- Score the quality of 16 ADL motor performance skills and 20 ADL process performance skills
- Print computer-generated reports that facilitate occupation-focused documentation and occupation-based intervention planning
- Interpret results from criterion and norm referenced perspectives
- Document the effectiveness of OT interventions and measure progress over time

Age range: 2 years old and above, including older adults
Conditions: Persons with or at risk for disabling conditions, or those who are well
Administration time: 1 hour or less
Detailed assessment information: www.AMPSIntl.com
